

Commitments to Responsible Pipeline Construction

SAFE & QUALITY CONSTRUCTION

INGAA members are committed to safe and responsible pipeline construction practices.

- **We employ qualified pipeline construction inspectors.** In addition, we are working to have our pipeline construction inspectors complete a new advanced certification program (API 1169 Pipeline Construction Inspector Certification Program) by the end of 2018.
- **We ensure all construction materials** meet or exceed design specifications and regulatory requirements.
- **We inspect and test all new pipelines before they are put in service.** This includes weld and coating inspection and pressure testing.

RESPECTING COMMUNITIES & LANDOWNERS

We communicate with interested parties before, during and after construction.

- **We work with the community and other stakeholders** to discuss options to preserve historic, cultural and community resources and give the public opportunities to express views.
- **We will continue to implement INGAA's "Commitment to Landowners" on all projects.** We negotiate in good faith and require our representatives to interact respectfully and productively with landowners and other stakeholders.
- **We provide timely information and advance notification** to our neighbors and landowners before undertaking planned construction activities.
- **We proactively engage first responders and local safe digging programs (One Call/811).** We provide information on pipeline locations and response procedures.

PRESERVING ENVIRONMENTAL RESOURCES

We use construction processes and technologies designed to minimize impacts to natural resources.

- **We are committed to constructing and siting our pipeline facilities in an environmentally responsible manner.** The siting and construction process is designed to balance the need to provide safe and reliable energy with the need to protect air, water, land and wildlife.
- **We evaluate and implement appropriate construction methods** to avoid or minimize impacts to environmental and cultural resources.
- **We restore and revegetate pipeline rights of way and construction work areas.** We work with landowners and resource agencies to preserve water and land resources and minimize long-term effects resulting from construction.

RESPECTING REGULATIONS

We respect the regulatory processes that govern our construction projects.

- **We work with regulators to ensure** that our pipelines are designed and built safely, with quality materials, in ways that minimize the impact to the environment and the community.
- **We design and construct our pipelines in compliance** with a comprehensive framework of regulations.
- **We comply with the applicable processes** that govern easement acquisition, certification, permitting, construction, operations and maintenance of our facilities.
